DETAILED ACTION

Claim Rejections - 35 USC § 112

- The following is a quotation of the second paragraph of 35 U.S.C. 112:
 The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.
- 2. Claims 1-4 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

If claim 2 is to be treated as adding a further limit to claim 1 rather than reciting a limitation already inherent in claim 1, then the intended scope of the term "equivalence" as used in "equivalence packet" in claim 1, and consequently the intended scope of the term wherever it is recited, is made unclear.

Claim Objections

3. Claim 2 is objected to under 37 CFR 1.75(c), as being of improper dependent form for failing to further limit the subject matter of a previous claim. Applicant is required to cancel the claim, or amend the claim to place the claim in proper dependent form, or rewrite the claim in independent form.

In light of the disclosure, a limitation upon "comparison data" to be "either 0 or 1", even if narrowly construed to mean "either all 0 or all 1", appears to be inherent in "comparison data that should have the value of said digital data of said equivalence packet" as recited in claim 1, if the term "equivalence packet" is to be taken as being of

Art Unit: 2133

narrower scope than would be met by any packet with data to be subjected to the claimed comparison process.

Claim Rejections - 35 USC § 102

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.
- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- (e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.
- 5. Claims 1-8 are rejected under 35 U.S.C. 102(e) as being anticipated by U.S. Patent No. 6,542,538 to Fischel *et al* (hereafter Fischel).

Fischel discloses comparison of transmitted and received test data patterns for bit error rate testing (col. 16, lines 44-60) using test packets (Fig. 9) to carry the test data patterns in the payload portions (916). The test data pattern may be pseudorandom, an all ones pattern, or some other pattern (col. 6, lines 55-65). Fischel's testing arrangement may be implemented in hardware or software (col. 18, lines 32-38).

6. Claims 1, 3, 3, 5 and 7 are rejected under 35 U.S.C. 102(b) as being anticipated by European Patent Application EP 0 961 437 A1 to Huysmans *et al* (hereafter Huysmans).

Huysmans discloses comparison of transmitted and received test data patterns for bit error rate testing (par. 0042-0043) using unused cells as test packets to carry the test data patterns in the payload portions.

Claim Rejections - 35 USC § 103

- 7. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 8. Claims 4, 6 and 8 are rejected under 35 U.S.C. 103(a) as being unpatentable over Huysmans.

Regarding claim 6, Huysmans doesn't specify using pseudo-random data for the test data. Official notice is taken that the advantages of using pseudo-random data for error rate testing were well known at the time the invention was made. It would have been obvious to a person having ordinary skill in the art at the time the invention was made to implement the test patterns in Huysmans' testing arrangements by using pseudo-random test data. Such an implementation would have been obvious because the advantages of using pseudo-random data for error rate testing were well known at the time the invention was made.

Regarding claims 4 and 8, Huysmans doesn't specify implementing in software the logic of the testing arrangements. Official notice is taken that the advantages of using software to implement logic arrangements were well known at the time the

Application/Control Number: 09/901,150

Art Unit: 2133

invention was made. It would have been obvious to a person having ordinary skill in the

Page 5

art at the time the invention was made to implement the logic in Huysmans' testing

arrangements by using software. Such an implementation would have been obvious

because the advantages of using software for implementing logic were well known at

the time the invention was made.

Conclusion

9. The prior art made of record and not relied upon is considered pertinent to

applicant's disclosure.

Any inquiry concerning this communication or earlier communications from the

examiner should be directed to Stephen M. Baker whose telephone number is (703)

305-9681. The examiner can normally be reached on Monday-Friday (11:00 AM - 7:30

PM).

If attempts to reach the examiner by telephone are unsuccessful, the examiner's

supervisor, Albert DeCady can be reached on (703) 305-9595. The fax phone number

for the organization where this application or proceeding is assigned is (703) 746-7239.

Any inquiry of a general nature or relating to the status of this application or

proceeding should be directed to the receptionist whose telephone number is (703) 305-

3800.
